Experimental probability (practice) | Khan Academy How to find the Experimental Probability of an event? Step 1: Conduct an experiment and record the number of times the event occurs and the number of times the activity is performed. Step 2: Divide the two

numbers to obtain the Experimental Probability. How to find the Theoretical Probability of an event? Theoretical Probability & Experimental Probability

... Experimental probability is the results of an experiment, let's say for the sake of an example marbles in a bag. Experimental probability would be drawing marbles out of the bag and recording the results. Theoretical probability is calculating the probability of it happening, not actually going out and experimenting. Theoretical and experimental probabilities (video) | Khan ... Experimental And Theoretical Probability Practice ... The theoretical probability is 8.3% and the experimental probability is 4%. Although the experimental probability is slightly lower, this is not a significant difference. In most experiments, the theoretical probability and experimental probability will not be equal; however, they should be relatively close.
