Enfin un week-end en amoureux ! Pour fêter leur premier anniversaire de mariage, Regan Reilly et son mari Jack ont

élu Cape Cod, ses plages sauvages et son décor de rêve. Mais leur tête-à-tête est de courte durée : Adele Hopkins, une retraitée récemment installée sur l'île, disparaît au cours d'une violente nuit de tempête. Très vite, tout porte à croire qu'elle n'avait pas que des amis. La course contre la montre commence pour Jack et Regan qui ne sont pas près d'oublier cet anniversaire... Impossible de lâcher le nouveau suspense de Carol Higgins Clark : l'intrigue aux multiples rebondissements mêlée à son humour légendaire font de *Tempête sur Cape Cod* une lecture idéale !

Humans evolved in the dynamic landscapes of Africa under conditions of pronounced climatic, geological and environmental change during the past 7 million years. This book brings together detailed records of the paleontological and archaeological sites in Africa that provide the basic evidence for understanding the environments in which we evolved. Chapters cover specific sites, with comprehensive accounts of their geology, paleontology, paleobotany, and their ecological significance for our evolution. Other chapters provide important regional syntheses of past ecological conditions. This book is unique in merging a broad geographic scope (all of Africa) and deep time framework (the past 7 million years) in discussing the geological context and paleontological records of our evolution and that of organisms that evolved alongside our ancestors. It will offer important insights to anyone interested in human evolution, including researchers and graduate students in paleontology, archaeology, anthropology and geology. "A masterful accomplishment—Allen, Pondella and Horn have

assembled a talented team of experts who produce authoritative, up-to-date accounts. This book will be used as the primary text in many fish biology courses and as a valuable reference elsewhere. Here is a wealth of data waiting to be mined by legions of graduate students as they generate the new ideas that will motivate marine ecology for years."—Peter Sale, Editor of *Coral Reef Fishes: Dynamics and Diversity in a Complex Ecosystem*

"A copiously illustrated and comprehensive interpretation of the past, present, and future state of over 500 species of fishes in Californian waters. A compilation of virtually all the many important studies on the ecology of California marine fishes."—Bruce B. Collette, National Marine Fisheries Service and co-author of *The Diversity of Fishes*

As environmental deterioration became a major social and political issue near the end of the twentieth century, activists in Nova Scotia stood together to defend the places they called home. Political radicals and conservatives alike worked to achieve legislative and social success, even as they disagreed over fundamental principles. *In Defence of Home Places* examines the diversity of this movement, its early accomplishments, and the disagreements that caused its eventual weakening and division. It places Nova Scotian environmental activism within national and international contexts and explores the choices and tactics that brought about its greatest successes and failures.

In the major cities of Asia, Africa and Latin America, the urban poor often have to step outside the law in order to gain access to housing. Much has been written about the problems they face, but few studies have asked why it matters that their housing is illegal, or what should be done about it. This book seeks to answer these questions by exploring the role of law in the process of urban change. Its broad geographical coverage combines national case studies with overview chapters by leading specialists in the field. An original and comprehensive book, it aims to bring the largely neglected discussion on law and urban change to the attention of those interested in urban studies, to demystify the subject and challenge the uncritical treatment which it has received in traditional legalistic studies.

Dr. D. S. Henderson, Chairman of the L. B. Smith Institute of Ichthyology and Vice Chancellor of Rhodes University

This book is a unique, international collaborative effort ranging all of the colour plates for the book. For the past of 76 scientists, representing 15 countries. Several skilled eight years, she has been assisted in the research, writing artists and photographers have also contributed to the and editing of the book by Dr. P. C. Heemstra. numerous and beautiful illustrations.

Schlesinger Foundation. tute with Rhodes University and happy to see the successful Although this book is an impressive contribution to the completion of this long-awaited work. Three complete novels from the Regan Reilly mystery series: Zapped, Cursed, and Wrecked. Join Regan Reilly as she takes on NYC during a blackout, returns to LA to help a friend out of a jam, and tries to have a romantic anniversary weekend on Cape Cod with calamitous results in these bestselling novels! Creaturely Theology is a ground-breaking scholarly collection of essays that maps out the agenda for the future study of the theology of the non-human and the post-human. A wide range of first-rate contributors show that theological reflection on non-human animals and related issues are an important though hitherto neglected part of the agenda of Christian theology and related disciplines. The book offers a genuine interdisciplinary conversation between theologians, philosophers and scientists and will be a standard text on the theology of non-human animals for years to come. Contributors

include: Esther D. Reed (Exeter), Rachel Muers (Leeds), Stephen Clark (Liverpool), Neil Messer (Lampeter), Peter Scott (Manchester), Michael Northcott (Edinburgh), Christopher Southgate (Exeter) A checklist of Philippine fishes was prepared for the Philippine Fishery Program of the Fish and Wildlife Service to provide a knowledge of the kinds of fishes that comprise the fish fauna of Philippines to serve as a basis for their conservation and management. Each entry includes the source from which it was taken. This is the first attempt to bring together diverse scholars, using different lenses, to study South Africa's Border War. As a book, it is critical in approach, provides deeper reflection, and focuses specifically on the SADF experience of the war. The result is a more complex picture of the war's dynamics and its legacies. Although South Africa is a vastly different country today, the study of the Border War opens a range of questions, also relevant to contemporary deployments such as in Lesotho (1998) and the Central African Republic (2013). It includes the debate on participation in foreign conflicts; on the deployment, design and preparation of appropriate, modern armed forces and their use as foreign policy instruments in far-off theatres; on military planning; and, as the historical controversies regarding the battles at Cuito Cuanavale and Bangui illustrate, on the interface between foreign campaigning and domestic politics. An alphabetical listing of all officers and warrant officers of the Army National Guard currently serving in an active status or assigned to the Inactive National Guard. The new edition of this bestselling literary theory anthology has

been thoroughly updated to include influential texts from innovative new areas, including disability studies, eco-criticism, and ethics. Covers all the major schools and methods that make up the dynamic field of literary theory, from Formalism to Postcolonialism Expanded to include work from Stuart Hall, Sara Ahmed, and Lauren Berlant. Pedagogically enhanced with detailed editorial introductions and a comprehensive glossary of terms

No environment on Earth imposes greater physical and biological constraints on life than the deep oceanic midwaters. Near-freezing temperatures, the absence of sunlight, enormous pressure, and a low food supply make habitation by any living thing almost inconceivable. Yet 160 species of anglerfishes are found there in surprising profusion. Monstrous in appearance, anglerfishes possess a host of unique and spectacular morphological, behavioral, and physiological innovations. In this fully illustrated book, the first to focus on these intriguing fish, Theodore W. Pietsch delivers a comprehensive summary of all that is known about anglerfishes—morphology, diversity, evolution, geographic distribution, bioluminescence, and reproduction.

Leo Varadkar's rise to the office of Taoiseach is a remarkable tale from any perspective, taking in personal struggle and political intrigue. The son of an Indian immigrant, this outspoken young politician came out as gay amid the full glare of Ireland's media, before orchestrating a secret two-year campaign to become leader of the country. Along the way, he put his political career on the line to defend police whistleblowers and survived an internal party purge after

backing the loser in a failed leadership heave against Fine Gael leader Enda Kenny. Now, in this first full-length biography, journalists Philip Ryan and Niall O'Connor provide the definitive account of the most talked-about Irish politician in decades. Family, friends and colleagues have provided exclusive behind-the-scenes detail on Varadkar's meteoric rise to power, painting an intimate portrait of the man shaping Ireland's future.
