The End of Performance Appraisal Nov 10 2020 This book demonstrates, in detail, why annual performance appraisals might still work in hierarchical environments, but largely fail in agile ones. The annual performance appraisal is one of the world's most widely used management tools. For many years, it was indeed seen as a pre-requisite for successful leadership and professional management. While most managers and employees have always been sceptical in this respect, those at a strategic level are now also realising it causes more harm than good, and a growing number of leading companies have similarly abolished this approach. One key reason lies in the changing working world, and the quest for greater organisational agility. Companies are moving away from rigid structuring. The arguments are presented objectively but with practical relevance, coherently illustrating the available alternatives for achieving what annual performance appraisals largely have not.

discrepancies in a performance appraisal system, determining if the system is being effectively implemented, and assessing whether the desired objectives are being achieved. . . . In general I would agree that Baker has met his goals, and his book will be useful to practitioners if they are interested in understanding what they should be doing to conduct effective performance appraisals. . . . an organized, generally well-written book on the performance appraisal process. Personnel Psychology Here is a practical, procedure-oriented guide for managers, supervisors, human resource professionals, and training and development specialists--to help identify the causes of failure of performance appraisal and supervision. Baker begins with a discussion of the need for procedures to identify the causes of failure of performance appraisal and supervision, and describes a sound practical concept of evaluation that can be used to meet this need. Systems analysis is used to describe a comprehensive performance appraisal system that contains all of the parts necessary to function effectively. The consequences of failure are also enumerated for each step of the process. Procedures are included to identify discrepancies in the system design of an organization, to determine if the parts of the system are being carried out in practice, and to determine if the desired objectives are being achieved. These procedures also include ways to determine if appropriate methods are being used to measure performance and ways to control human error.
