The discipline of public administration draws predominantly from political and organizational theory, but also from other social and behavioral sciences, philosophy, and even theology. This diversity results in conflicting prescriptions for the "proper" administrative role. So, how are those new to public administration to know which ideas are "legitimate"? Rather than accepting conventional arguments for administrative legitimacy through delegated constitutional authority or expertise, *Logics of Legitimacy: Three Traditions of Public Administration Praxis* does not assume that any one approach to professionalism is accepted by all scholars, practitioners, citizens, or elected representatives. Instead, it offers a framework for public administration theory and practice that fully includes the citizen as a political actor alongside elected representatives and administrators. This framework: Considers both direct and representative forms of democracy Examines concepts from both political and organizational theory, addressing many of the key questions in public administration Examines past and present approaches to administration Presents a conceptual lens for understanding public administration theory and explaining different administrative roles and practices The framework for public administration theory and practice is presented in three traditions of main prescriptions for practice: Constitutional (the bureaucrat), Discretionary (the entrepreneur), and Collaborative (the steward). This book is appropriate for use in graduate-level courses that explore the philosophical, historical, and intellectual foundations of public administration. Upon qualified course adoption, instructors will gain access to a course outline and corresponding lecture slides. This book is a joint effort of researchers who have been involved in research-projects and programmes that have been trying to chart and reflect upon the implications of Information and Communication Technologies (ICTs) for Public Administration (Tilburg/Rotterdam, Kassel, Irvine, Nottingham/Glasgow). Since the fifties, computers had largely facilitated and the transformation of the minimal 'Night-Watch-state' into the modern 'Welfare-state', through their contribution to their effectivity, productivity and efficiency. In most Handbooks of Public Administration, computers are seen as neutral instruments and, most of the time, the role of computer technologies in the transformation of public administration is completely neglected. This 'deafening silence' is a great contrast with the way ICT's are actually changing public administration. The faster the developments in a field of study are, the more difficult it is to let the theories, related to that field of study, mature. In such circumstances, most statements will remain provisional and context-dependent. 25 years of research in Irvine (California) and Kassel (Germany) and more than 10 years of research in Tilburg/Rotterdam (The Netherlands) and about seven years of research in Glasgow/Nottingham (the United Kingdom) nonetheless enables the presentation of a modest image of public administration as it is entering the information age. Researchers in each of these groups have, nevertheless, not stopped trying to phrase theories about the implications of informatization for public administration with a more or less larges scope, that are robust in different contexts and over longer periods of time. These results and theories, covering a broad set of elements of the body of knowledge of public administration, are presented in this volume. As the authors try to demonstrate in this book, informatization developments in public administration do not only challenge the existing body of knowledge of the public administration discipline, but they are also opening up new perspectives and paradigms for the study of public administration.
