**Handbook of Energy-Aware and Green Computing, Volume 2** Sep 04 2020 This book provides basic and fundamental knowledge of various aspects of energy-aware computing at the component, software, and system level. It provides a broad range of topics dealing with power-, energy-, and temperature-related research areas for individuals from industry and academia.

**The Handbook of Lighting Surveys and Audits** Nov 18 2021 Complete with checklists and forms, this step-by-step guide tells everything the facilities management professional needs to know about conducting lighting surveys and audits in a commercial or industrial facility. Lighting audits are required when companies undertake lighting retrofits and related projects in order to improve their lighting systems. The best way to ensure maximum performance of the new systems, maximize return on investment, and prove energy savings (in order to qualify for financial assistance or meet government targets) is to start with a comprehensive lighting audit. Public and private incentives along with recent energy saving advances in lighting technology have motivated companies to turn to energy saving solutions. Written by one of the nation's leading authorities on lighting and the education of lighting professionals, this practical handbook provides the auditor with the solid, useful information needed to accomplish accurate surveys and audits.

Operator's and Organizational Maintenance Manual Jan 01 2023

Handbook of Radiotherapy Physics Dec 08 2020 From the essential background physics and radiobiology to the latest imaging and treatment modalities, the updated second edition of Handbook of Radiotherapy Physics: Theory & Practice covers all aspects of the subject. In Volume 1, Part A includes the Interaction of Radiation with Matter (charged particles and

photons) and the Fundamentals of Dosimetry with an extensive section on small-field physics. Part B covers Radiobiology with increased emphasis on hypofractionation. Part C describes Equipment for Imaging and Therapy including MR-guided linear accelerators. Part D on Dose Measurement includes chapters on ionisation chambers, solid-state detectors, film and gels, as well as a detailed description and explanation of Codes of Practice for Reference Dose Determination including detector correction factors in small fields. Part E describes the properties of Clinical (external) Beams. The various methods (or 'algorithms') for Computing Doses in Patients irradiated by photon, electron and proton beams are described in Part F with increased emphasis on Monte-Carlo-based and grid-based deterministic algorithms. In Volume 2, Part G covers all aspects of Treatment Planning including CT-, MR- and Radionuclide-based patient imaging, Intensity-Modulated Photon Beams, Electron and Proton Beams, Stereotactic and Total Body Irradiation and the use of the dosimetric and radiobiological metrics TCP and NTCP for plan evaluation and optimisation. Quality Assurance fundamentals with application to equipment and processes are covered in Part H. Radionuclides, equipment and methods for Brachytherapy and Targeted Molecular Therapy are covered in Parts I and J, respectively. Finally, Part K is devoted to Radiation Protection of the public, staff and patients. Extensive tables of Physical Constants, Photon, Electron and Proton Interaction data, and typical Photon Beam and Radionuclide data are given in Part L. Edited by recognised authorities in the field, with individual chapters written by renowned specialists, this second edition of Handbook of Radiotherapy Physics provides the essential up-to-date theoretical and practical knowledge to deliver safe and effective radiotherapy. It will be of interest to clinical and research medical physicists, radiation oncologists, radiation technologists, PhD and Master's students.
