Innovation, which in essence is the generation of knowledge and its subsequent application in the marketplace in the form of novel products and processes, has become the key concept in inquiries concerning the contemporary knowledge based economy. Geography plays a decisive role in the underlying processes that enable and support knowledge formation and diffusion activities. Place specific characteristics are considered especially important in this context, however, more recently investigation into innovative capacity of places has also turned its attention to external knowledge inputs through innovation networks, and increasingly recognize the evolutionary character of the processes that lead to knowledge creation and subsequent application in the marketplace. The chapters that comprise this book are embedded at the intersection of the dynamic processes of knowledge production and creative destruction. The first three contributions all discuss the role of global innovation networks, in the context of territorial and/or sectoral dynamics, while the following two chapters investigate the evolution of regional or metropolitan knowledge economies. The final three contributions adopt a knowledge base approach in order to provide insight into the organisation of innovation networks and spatiality of knowledge flows. This book was published in a special issue of *European Planning Studies*. Turbulence characterises the current global scene. This book uses complementary theoretical approaches to understand and help prescribe

policies to 're-frame' the regional development problem in turbulent times. These approaches are: evolutionary complexity; evolutionary economic geography; emergence theory; and resilience theory. From below, they address the four major crises creating a 'perfect storm' for societies and economics involving: the climate change crisis; the energy crisis; the banking and financial crisis; and the global economic crisis. This book analyses and proposes ways in which regional economies, in particular, are having to be 'reframed' to address these crises. First, many must evolve in new ways, possibly moving back from the 'service economy' towards a new, greener form of manufacturing of goods as well as services. Accordingly, regional economies are innovating in new ways. Amongst these are the quest for 'relatedness' within their own regional orbits, and promoting 'modularity' as a mode of analysis and a policy stance to stimulate innovation across industry and geographical borders. Finally, regional economies and societies are discovering that, from a 'resilience' perspective, they must find answers to the higher levels of governance with which they increasingly struggle. In this respect regional economies are in 'transition' and regional processes are 'emergent'. The transition seeks to address the four crises, involving re-balancing, re-directing and re-framing future policy and practice. This book describes many of the novel 'framings' involved in understanding the new ways in which this major task is being addressed in theory, policy and everyday practice.
